

# NEWS RELEASE

Denver, Colorado, USA March 1 2019

**Not all inner record sleeves are created equal!**

**TO BE INTRODUCED AT THE MONTREAL AUDIO FEST 2019, March 22-24, 2019, are CUSTODIAL & ARCHIVAL QUALITY, 3 LAYER, 4 MIL, NON-PVC, ANTI-STATIC, ANTI-FUNGAL, RECORD SLEEVES.**

Once records are cleaned and restored one should not reuse the paper or plastic record sleeve as they may contain contaminants such as fungus which will be transmitted to the newly restored record. Discard the used plastic sleeve. As to the paper sleeve: If the paper sleeve has printing on it, just annotate using a 3M Post-It Note the name of the album and store the printed sleeve in a plastic container with other like sleeves as the printing and message on the sleeve is part of your record and is valuable. Keep the sleeve if you intend to sell or donate the records, just do not reuse it.

**As to our sleeve:** KirmussAudio record sleeves are frosted, have UV filtering, and are perfect either as a replacement sleeve or for storing newly cleaned and restored records. Non-PVC, they are made with three layers of 4 mil. (not 3) High-Density Polyethylene (HDPE) where a layer of Alkaline Paper is sandwiched between 2 layers of HDPE which adds stability and structure to the sleeve. *Paper and rice fillers promote the growth of fungus.* Anti-fungal, dust-free, the KirmussAudio sleeves are “gentle, record friendly”, and are resistant to static build up and protects the record.

## ORDERING INFORMATION:
